Gilden, 1623.

A Prognostication published for
this yeare of our Lord and Sau-
our IESVS CHRIST.

1623.

Being the third after Leape-yeare.

Wherein is set downe according to
Arte, an Astrologically description
of the likely seasons of the Foure Quar-
ters of the yeare.

With other fit matter conuenient
for such a worke.

By G. Gilden, φιλόμαθς.

Ludit in humanis Diuina potentia robus.

LONDON,

Printed for the Company of
Stationers. 1623.

To the Reader.

Seeing (courteous Reader) that Prognostications and annuall Almanakes are commonly published for the vse and behoofe of the common people: I haue thought good for their better vnderstanding to be as plaine therein as I might; and therefore haue written little in this Almanacke and *Astronomicall Table*, but what (with small paines euen of the simplest) may be easily vnderstood. Bnt seeing the predictions of the weathers dispose, are commonly by the common sort taxed of vntruth, I haue (as formerly) thought good onely to set downe the Apects of the Moone and the rest of the Planets, for the Iudicious to find out of themselues, which being reduced into twelue colomes, for the seuerall Monethes, I haue set them in my Prognostication, seeing the Table annexed is much pertinent thereunto: for the better vnderstanding whereof and the like tables, if any be desirous so to inrich their vnderstanding with Mathematicall knowledge, hee shall find the workers both of ancient and moderne writers so plentifully, as that there were neuer better nor nearer helps for the attayning thereof, then are at this present, as may well be proued

To the Reader.

by those excellent workes and inuentions, that haue lately beene published, namely, the admirable Tables of Logarithmes, inuented & published by that Honorable Lord *Iohn Nepair*, Barron of *Marchifson*; and the excellent Table called the *Arithmetical Jewell*, inuented by *M. William Pratt*, who teacheth the vse thereof in the City of London. There is also rules set forth by Master *Edmund Gunter*, which for navigation and most of the conclusions that can be wrought either by Globe or Spheare far exceedeth all Instruments, performing also in *Arithmetike* all questions in *Multiplication*, *Diuision*, or the *Extraction* of Rootes, which rules as also all other *Methematicall* instruments are axactly made in wood, by my very good friend Master *Iohn Thomson* in *Hosier-lane* neere *Smithfield*, and in Copper by Master *Elias Allen*, at his house ouer against *S. Clements Church* without Temple Barre. Whereupon I conclude that the attayning of those excellent Arts is now easier, then at any time in formes Ages they haue been. And so for this time I bid thee farewell.

Thine. G. Gilden.

A

A necessary rule to know the beginning & ending of every Terme, with their Returnes.

Hillarie Terme beginneth the 23. daie of January, and
endeth the 12 of February, and hath foure returnes.

Ostabis Hillarij.	}	Crastino Purifica.
Quind Hillarij.	}	Ostabis Purifica.

Easter Terme beginneth 17 dayes after Easter, and
endeth the next monday after Ascension day, & hath
foue Returnes.

Quind. Paschæ.	}	Mense paschæ.	}	Quinque paschæ.
Tres paschæ.	}		}	Crast. Ascen.

Trinitie Terme beginneth the Fryday next after Tri-
nitie Sunday, and endeth the Wednesday fortnight af-
ter, and hath 4 returnes. that is to say,

Crasti. Trinitatis.	}	Quind Trinitatis.
Ostabis Trinitatis.	}	Tres trinitatis.

Michaelmas Terme beginneth the 9 day of October,
and endeth the 28 of November, and hath 8 Returnes,
that is to say.

Ostabis Michael.	}	Crast. Animarum.	}
Quind Michael.	}	Crast. Martinj.	}
Tres Michael.	}	Ostabis Martinj.	}
Mense Michael.	}	Quind. Martinj.	}

Note that the Exchequer openeth Eight dayes before
any Terme begins, except Trinity Terme, in which
it openeth but foure dayes before.

B 3

A

A briefe Declaration of the disposition of the foure quarters of
this yeare. 1623.

Of Winter.

Winter, the first quarter Astronomicall, began the last yeare the 12 day of December, when the Arch-flame to light being in his greatest digression from the Equator to the South, and scited in the Tropicall poynt of Capricorne, bzinging diuers impediments euident in nature, which bereaueth our Septentrionall partes of the heate and vigoꝝ, wherewith at other times, the Sun being moze neerer & moze eleuiated, doth preserve & cherish the Elements and all things compassed of them, whether begitable, or sensatiue.

So as now commeth cold and darknesse to vs on this pꝛoꝛtherne part of the Equator. But the most pleasant & comfoꝛtable tyme of Summer to the inhabitants nere the south pole. viz. Noua Guinea, Chaldi Terra del Fiuego, &c.

In this Wumall quarter it is good to drinke litle and eate well, because at this time mans stomacke being hot, is aptest to disgost.

The diseases incident to this quarter, are Pusthes in the face, Leprosie, Toth-ach, red spots, Feauers, the Scabbs, Fluxes of blood in the inferiour parts, paine of the eyes, Pallies, Cunts, and such like.

Of

A Prognostication.

Of the Spring.

THe Spring (according to Astronomicall computation) beginneth when the Sun enters into the Dodecatemory of Aries, or point of the interfection of the Ecliptick & Equator, whereupon are grounded the generall predictions of the whole yeare succedent as the Radical or Genethliacall reuolution thereof, hapening this present yeare the 12 of March, hauing then prouolued himselfe to the puntuall interfection of the vernal Equinox: By which equall vicissitude of night and day, the world thereby for that time hath y^e fruition of his splendant rayes, most gratefull to the dwelles within the temperate Zone, as Europe is: but ouer seruent and parching heate, to the inhabytants nere the line in the Torrid Zone, as the most part of Affrica, & East Indyes, with the spicery Isles, And also to new Spaine.

This quarker is most comfortable of all the yeare, and of nature warme and moyst, yet the ordinary diseases thereof are Leprosies, red spots, Tooth-ach, Feauers of blood, Pusles, or Wheales in the face, small pox, ringwormes, falling sicknes, paines in the throate and neck, the Kings euill, Wennes, & griefes in the sholders and armes, caused by cloud, fainting, and Phrenesies.

A Prognostication.

Of Summer.

Whereas the continuance of action doth necessarily add foure of operation to all naturall agents : and as it commeth to passe in Winter, that by reason of the Suns remote position, that his continuance about the Horizon is shortest, and his absence vnder the same longest, thereby causing the shortest dayes and longest nights: so now in Summer, which quarter beginneth when faire Phebus hauing arriued to the highest pitch of eleuation in our Horizon, by his farthest obliquation to the North, bee produceth the longest day, and the shortest night in the year, which will happen on the 12 day of Iune.

This quarter is hot and dry in nature, and doth so accordingly alter the humors in mans body.

The sicknesses agreeing to y^e nature hereof are Græues and torments about the breast, ribbes and spleene, pusshes, Leprosies & diseases of the face, (as in the Spring,) bleared & soze eyes, with other impediments therein, the Plurisie, Cough, heart and stomacke aking, Sorrow, Werations, Feuers of blood, Apostumes, Pestilence, the Jaundice, payne in the belly & secret partes, with other infirmities proceeding of Melancholly.

Of

Gilden. 1623.

Of Autumne.

The Sun having entred into Libra, the other Equinodiall dodecatemozy maketh equall arches of Sunshine on the surface of this Globe of Mortality, producing a second Spring, which falleth out this yeare on the 13 of September, and this quarter is by nature colde and dry.

The Diseases thereof, are properly paynes in the backe, darknes of sight, retention of Urin, Fluxes of blood, paynes in the priuie parts, with infirmities in the face, also the Canker, Fistuloes, Emroydes, the Stone and grauell, Fea- uers of blood, and impediments in the eyes.

Of the Eclipses of this present
yeare. 1623.

This yeare 1623 there will be (though) not all visible in these our parts, Foure Eclipses of the Sun and Moone, namely 2 of the Sunne, and 2 of the Moone. Whereof the first of the Moone onely will appeare in this our Horizon, & all the rest will bee visible in Countries farre remote, and therefore are needlesse of any great obseruation in this place.

But that first of the Moone will happen here with vs upon the 5. day of Aprill according to our accompt here in England, and the 15 day
of

Gilden. 1623.

of Aprill according to the new stile at 4 a clocke
36 min: and 2 seconds in the morning, at which
time the Sun will be in 24 grad 15. min: & 5 sec:
of Aries, & Luna in 24 grad 15 min: and 5 sec: of
Libra, not farre from Caput Draconis.

The beginning of which Eclipse will be at 3.
a clocke in the morning, and the end at 6. the
whole durance being 3 howers, and will be vi-
sible in this our horizon.

The second Eclipse is of the Sun, which will
happen vpon the 19 of Aprill, according to our
account, but vpon the 29 of the same moneth
according to the new stile, but will not be visible
here with vs.

The 3 Eclipse, is of the Moone happning vpon
the 28 of September by the old account and
on the 8 of October according to the new. But
will not be visible in our Horizon.

And the Fourth Eclipse which will be this
yeare is of the Sun, and will happen vpon the
13 day of October according to the old stile, but
on the 23 of the same moneth according to the
beyond seas account, but will also be visible
here with vs.

The

*The Disposition of the Ayer in more
particular.*

FOrasmuch as I haue noted the Aspects of
☿ne and Planets amongst themselves,
against every day of the Moneth, in these 12.
columes following, I thought it would be no
lesse convenient then if setting downe the dayly
dispose of the weather, I shall by a table imme-
diately following the said Columes shew how
by these aspects you may know the alteration of
the weather, whereby you may conceine, that if
by that Table alone, you may come neere to
know the change of the weather, the whole Art
is not so vaine as it is accompted but auaileth
to the knowledge of much truth.

The

A Prognostication.

The Aspects of the Moone, and

**A Table to know
when the Moone
will bee South for
euery day in the
yeare.**

Daves.	Hour :	Minut :	Day
1	12	48	16
2	1	36	17
3	2	24	18
4	3	12	19
5	4	0	20
6	4	48	21
7	5	36	22
8	6	24	23
9	7	12	24
10	8	0	25
11	8	48	26
12	9	36	27
13	10	24	28
14	11	12	29
15	12	0	30

From the chāg
to the full, the
Moone comes
to the South,
afternoone.

From the full
to the change,
the moone coes
to the South be
fore noone.

the left hand ouer against it, I find foure, &c. shew-
ing mee her coming to South to bee iust at foures
clocke in the afternoone.

**The use of the
Table.**

The age of the moone
being found in the
kalender (that is)
how many dayes is pass
from the time of her chang,
Therewith enter this ta-
bel, and hauing found it in
the first colūe to the left hand,
if it be before the full moone;
or to the right hand, if it
be after the full moone: you
shall haue in the middle col-
ūe, her coming to the
South, before or after as
is noted in the foot of the
Table.

As for example.

The 25 day of January
the Moone is 5 dayes old,
wherwith entring the ta-
ble in the first colūe to
the left hand ouer against it, I find foure, &c. shew-
ing mee her coming to South to bee iust at foures
clocke in the afternoone.

C

To

A Prognostication.

*To know the houre of the night by the
Moone on a Sunne Diall.*

The time of the Moone comming to South, being found in the former table, in manner aforesaid, looke in a Sun-diall vpon what houre before or after 12 on the diall the moones shadow falleth, for so many houres it is before or after the moones comming to South.

Example.

I find the Moone South, the aforesaid 25 day of Januarie at iust 4 a clocke after noone, looking on a sun-diall, I finde her shadow to fall the 3 houre after 12. on the Diall, wherevpon I conclude, it is iust 7 clocke at night, which is 3 houres after the comming to South.

Astronomicall Elections for Physicke and Chyrurgery, depending on the course of the Moone.

When the body is filled with naughty and superfluous humors, it is conuenient for thee to draw blood so the heauens consent thereunto, and they are agreed there with, which being not circumspectly weighed, it may be most dangerous to the patient (whereof no vnderstanding man is ignorant) but when necessitie bidgeth.

As for the Pestilence, Plurisie, Phrensie, &c. then though the Heauens denie, yet a vaine is speedily to be opened; Ad xgri salutem. This considered of medicines, some be purgative, some comfortive, and others in the meane betwixt both.

Medicinas

Medicines purgative be either Soluendo or Leniendo. In the first the ☿ must be in ☿ m or ☿. For the other the ♀ must be taken when she worketh more in moistnesse then in drynesse, being in ☿ or ☿ with ☿ and you must take heed in the howse of giving the medicine least the ☿ have any aspect with ☿ for he cometheth the humors, making the medicine worke little.

Likewise let her be free from any aspect with ☿ for he is the giver of life, the helper & comforter of the virtues, so that the medicine can but weakely expell the humors, making the body affected with an evil qualitie. Furthermore, in al purgative medicines, observe these ensuing rules: for in the administration of Physicke, are cheifly to be respected 3 things, viz. The time, the Age, and the manner of administration.

For the time of the yeare.

For the election of time, consideration is to be had, that it be not in extremitie either of heate or cold. And therefore Hipocrat: part 6 and 46 Aphorif. saith, that the Spring and Autumne are best for Physicke, and Summer and Winter bad, & to be used but upon necessitie. For in Summer the humors boyle, by reason of heate, causing great annoyance to mens bodies: yet if necessitie urge to take Physicke in Summer, it is best to take it by Vomite, and in Winter (if necessitie require) by purgation.

For the time of the Moneth.

Let not blood 3 dayes before and after the coniunction of the Moon, and ☿ the like of the coniunction of the ☿, and ☿ neither let blood ☿ and ☿ being in coniunction whilst ☿ is combust.

Let not blood the day before and after the full of the moon: the like observe the ☿ being in coniunction with saturne or Mars.

A Prognostication.

But the Moone in any Aspect with Δ or φ or in a *
or Δ with \odot or J , produceth a fit time to let blood.

The time of the Day.

The Morning fasting is best, or in the Evening after perfect digestion, with this proviso, that the ayre be temperate, and the wind not in the South.

For the Age.

Concerning the age, you are to vnderstand that decrepite old age, and yong infants, are vnfit to haue Physicke administred vnto them, or such as be vnder 14 yeares of age, & more then 56 yeares old, or such as be exceeding fatt, or very leane; and it is also dangerous for a yong man to take much Physicke: For as a learned Physitian saith, he that taketh much Physick when he is yong, will much repent it when he is old.

For the age to let Blood.

In youth, from the change to the first quarter.
In middle age, from the first quarter to the full.
In elder age, from the full to the last quarter.
In old age, from the last quarter to the change.
And after bleeding vse not violent exercise, no sleeping, no venery, or gluttony.

The manner of administration.

For the manner of Physicks administration Albusmazars opinion is, that the fittest times for Purgations are to be elected, according to the motions of the Moone in watery signes, as S M and K .

Others hold opinion that the first halfe of M and K are fit times: And when the moone is boyd of course, it is indifferent to take purgatiue medicines.

♂ in ♀ in { ♀ } not combust, is good to aoid cho } with
 * 02 Δ a= { ♂ } is good to purge phleme: (ler } electu-
 spect of { ♀ } good to expell melancholy: } aries.

♂ in ♀ in { ♀ } good to purge { choller } with
 * 02 Δ a= { ♂ } good to purge { phlegme } potioes
 spect of { ♀ } melancholy

♂ in ♀ in { ♀ } good to purge { choler. } with
 * 02 Δ a= { ♂ } good to purge { phleme } pilles.
 spect of { ♀ } melancholy

♂ in ♀ in { ♀ } good to purge { choller. } with any
 ♀ in * 02 { ♂ } good to purge { phleme. } kind of
 Δ with { ♀ } melancholy } medicine.

But note that you must looke that ♀ be not combust
 and that the ♂ □ 02 8 02 h 4 02 8 either to the ♀ 02 be=
 twene themseluer doe not hinder the operation of the
 Philicke.

Neither let the ♀ be in any of the signes that
 doe chesw the cubde as V, 8, ny. for then the medicine
 will stay but a little with the patient, causing him to
 Vomit, vnlesse you meane to purge by vomiting.

Also in purging the ♀ melancholy, let not h haue do-
 minion no; 4 in purging the ♀ sanguine or the liver, no;
 8 the cholericke, no; ♀ the head, no; ♀ in purging the
 lungs.

The ♀ being fortified, it is ill to purge ♀ by aine.

In the administratiō of purgations remember Haly
 his comentary vpon Ptolomy who saith, that the hu-
 mors from the change of the ♀ moue to the first quarter
 and from the full to the last quarter, doe moue from the
 inward parts of the body, to ♀ outward: And likewise
 from the first quarter to ♀ oppositiō, & also from the last
 quarter to the change, they moue from the outward
 parts to the inward.

Ⓒ 3

There:

A Prognostication.

Therefore in the first & 3 weekes of the M is best applying external euacuations: and in the second and 4 weekes internall purgations.

How the vertues be corroborated.

The vertues be either vitall, animall, or naturall.

The vitall vertues remaine in the heart, the animall in the braine, and the naturall in the liuer.

The vitall vertues are governed of \odot and V .

The animall of M & Q and Q .

The naturall of V and Q .

Other vertues be also governed by the Planets, as the vertue attractiue is governed of \odot . The digestiue of V . The retentive of H . The expulsiue of M .

Also the signes thus gouerne the vertues V and F rule the attractiue, II and II the digestiue, S and M the retentive, S and X the expulsiue.

Also the vertues be ruled by the Planets thus \odot the swell-spring of the vertue a vitall, M of the vertues animall, H of the receptiue, V of the augmentatiue, F of the attractiue, Q of the appetitiue, and Q of the imaginatiue.

Therefore when you would fortifie any of these vertues, fortifie the planet signifying the same; & it is done.

In letting of blood, you must know what persons are fit to blode, and what not: and if they be fit, how it is with the patient inwardly for his complexion and age; and outwardly, for the time of the yeare, and of the moneth as aforesaid.

For Complection.

For the Flegmaticke, let the M be in V , or, F when you draw blood. For the Melancholy in II , or III . For the Cholericke in S or X . And the Sanguine in any of the aforesaid.

The vnaccustomed are not to be Phlebotomized, least
• it

Gilden. 1623.

It breed some malady, vnlesse necessitie bidge it. And
you must also haue respect to the strength of the person.

*Certaine Elections concerning.
Husbandry.*

IT is best to plant in the last quarter of the ☾, so that
thee be not aspected by ☿ ☐ 02 8 of ♄ 02 8.

Sow Corne when the ☾ is in ♉.

Fell timber for building from Midsummer to Christmas
mas in the wane of the Moone.

Weld or libbe cattell when the ☾ in ♋ 02 ny.

Remoue trees the last quarte of the ☾, betwene Michaelantide, and Twelfetide.

The latter writers of Husbandry doe report, that
the seedes of tender hearbes, committed to the earth
in an apt time, the Moone being in her first quarter,
doe more speedily shoote vp, then otherwise, especially
being sowne after showres of raine on sunny & warme
places: With obseruation that the wind bloweth not
from the North, at the time of their sowing. And
though the ancient writers of Husbandry, haue pre-
scribed proper moneths and dayes for the sowing of
seedes: Yet may euery man obserue his owne rules
according to the nature of the place and ayre where they
are sowne. So that they consider also, that there be
some seedes, that by nature doe spring vs faster then
others.

Laus Deo.

FINIS.
